

FORMULATION OF SPECIFIC CHALLENGES

CHALLENGE

SUMMARY

Today we have a situation of incoordination and lack of resources in the stocking / desesting process and subsequent transportation to the customer / final consumer's home that generates inefficiencies in the process with high economic costs and quality of service. Therefore, we seek a technological solution that integrates the operations of portsur and its transportation providers, that allows to improve the resource management of both parties, automating processes and decision-making through ai.

RESTRICTIONS

- The solution must:
- Manage communications between the parties in a secure way (blockchain)
 - Able to learn through ai (needs forecast)
 - Scalable to other terminals
 - That allows the standardization of the information
 - With push communications before changes
 - Incident management in planning

INTEGRAL MANAGEMENT LOGISTICS PLATFORM

HOW WE CAN DO IT?

How we could optimize the management of resources, communication and coordination between the parties involved in a disposal process (transportation, truck load, available trucks, scales, tail management).
